Profile Summary

Java Full Stack Developer at Sony India Software Centre (since Aug 2023), building enterprise-grade microservices and warranty platforms deployed across multiple countries. Skilled in Spring Boot, Angular, and AWS with a consistent track record of reducing manual processing efforts through automation, delivering zero-defect production solutions, and receiving multiple Spot Awards for ownership and quality.

Technical Skills

Backend:	Java, Spring Boot, Spring MVC, Hibernate/JPA, RESTful APIs, Microservices, Monolithic Architecture
Frontend:	Angular, TypeScript, RxJS, Bootstrap, HTML5, CSS3, JavaScript
Database:	Oracle SQL, CRM Dynamics, Salesforce API Integration, Enterprise Application Integration
Cloud & DevOps:	AWS Athena, AWS OpenSearch, AWS CloudWatch, Git, CI/CD, Deployments
Core Expertise:	Role-Based Authorization, System Design, Batch Job Development, Production Issue Resolution, Root Cause Analysis, Business Requirement Analysis

Work Experience

Full Stack Developer (Java & Angular)	Aug 2023 – Present Bangalore
Sony India Software Centre	

Project: Sony Warranty Registration & Product Data Management

- Developed and maintained a monolithic enterprise application for Sony product warranty registration, sales report generation, and customer data management using Java, Spring Boot, CRM Dynamics, HTML, CSS, and JavaScript.
- Built automated batch jobs for warranty processing and customer onboarding, reducing manual business processing effort by ~50% and eliminating errors in report generation.
- Integrated multiple enterprise applications and third-party systems to enable seamless business communication and efficient data flow across platforms.
- Ensured high-quality application delivery by performing root cause analysis, fixing critical production issues, and maintaining 99%+ application uptime.

Project: Sony Pictures Content Management Platform

- Architected and developed secure backend microservices and REST APIs using Java, Spring Boot, and Oracle SQL for a large-scale global content management platform handling sensitive movie and business data for Sony Pictures.
- Implemented role-based access control (RBAC) ensuring secure access for Admin, Client, and Business users across all application modules and APIs — zero unauthorized access incidents in production.
- Integrated Salesforce APIs and multiple enterprise applications to automate business workflows and enable seamless data exchange across platforms.
- Leveraged AWS Athena and OpenSearch to handle large datasets, improving search performance and overall application efficiency.
- Monitored application health using AWS CloudWatch and CI/CD pipelines, enabling rapid issue detection and resolution.
- Contributed to multilingual translation features and regional user support, enhancing usability across multiple geographic locations.
- Collaborated with global business stakeholders to deliver scalable, secure, and high-quality solutions for sensitive enterprise applications.

Achievements

- Received multiple Spot Awards and client appreciation for delivering high-quality, innovative solutions and meeting critical business requirements.
- Reduced manual business processing effort by ~50% through automated batch job development for Sony warranty workflows.
- Recognized for ownership, consistency, discipline, and strong problem-solving abilities in delivering large-scale enterprise applications.

Education

B.E. Electronics & Communication Engineering — V.S.B Engineering College, Karur	2019 – 2023 86%
HSC — Bharathi Vidhyalaya Matric Hr. Sec. School, Tiruppur	2018 – 2019 86%
SSLC — Bharathi Vidhyalaya Matric Hr. Sec. School, Tiruppur	2016 – 2017 83%

Professional Strengths & Languages

- Strong ownership mindset with responsibility-driven delivery approach
- Ability to quickly understand business requirements and translate into technical solutions
- Experience working in large-scale enterprise systems with production responsibility
- Tamil (Native) | English (Professional Proficiency)
